

GUARDIAN SISMALARM

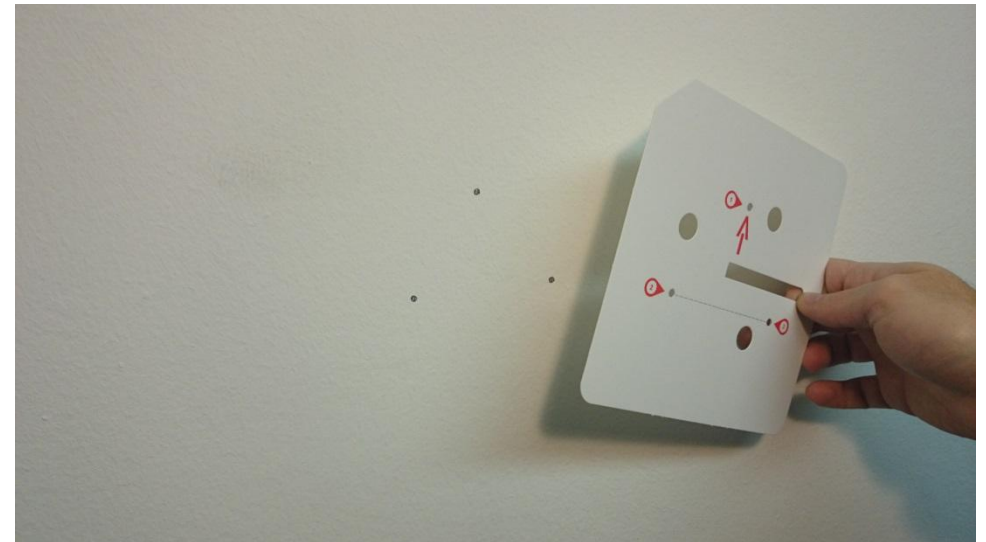

QUICK INSTALL GUIDE

Using the **drilling jig** included in the box...

...draw the **three hole marks** on the wall.

Use a **5mm diameter drill tip** to drill the 3 holes previously marked. Then push the 3 **wall plugs** included in the box into the drilled holes.

Using a screwdriver and the 3 screws included in the box fasten the **Guardian SismAlarm** base to the wall.

Remove the protection label from the **battery** included in the box and insert it in the battery retention slot present in the base. A short “**double beep**” notification will advise you if proper battery installation **is done**.

Using the transparent plastic tab as an orientation guide hook the **Guardian SismAlarm** cover on the **Guardian SismAlarm** base.

Press and hold the **central button** for 2 seconds to power on the **Guardian SismAlarm**. Wait until the automatic calibration is completed **without touching** the unit.

Congratulations!

Now **Guardian SismAlarm** will warn you when seismic events occur.
